

Basic Electronics Course Overview

Comprehensive Study Notes for Engineering, Diploma, & Science Students 

Welcome to Engineering Funda!

1. Course Introduction

- This course on **Basic Electronics** is prepared by Engineering Funda.
- **Target Audience:** *Engineering, Diploma, and Science students.*
- The course is developed based on *15 years of teaching experience.*

2. Course Preparation & Key Resources

- The course utilizes content from four key books:
 - VK Mehta
 - Albert Paul Malvino
 - Robert L. Boylestad
 - HS Kalsi
- Includes many *practice examples* from **GATE** and **UGC NET** examinations.

3. Course Scope & Objectives

- This is a **comprehensive course** designed to cover:
 - All fundamentals related to *University examinations.*
 - Numerous practice problems to aid in *competitive examinations* like **GATE, BARC, ISRO, UGC NET.**
 - Practical aspects and experiments using **Multisim software.**

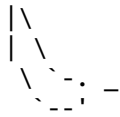

4. Course Syllabus: Chapter Breakdown (7 Chapters)

1. PN Junction Applications
2. Special Diodes
3. BJT Applications
4. AC Analysis of BJT
5. JFET (Junction Field-Effect Transistor)
6. MOSFET (Metal-Oxide-Semiconductor Field-Effect Transistor)
7. Basic Practicals using *Multisim software*

5. Learning Experience & Content Quality

- All videos are of *high quality*, featuring proper video editing and animation.
- Aims to provide an *excellent learning experience.*

6. Support & Engagement (YouTube & Android App) 🧡

- The instructor has been teaching *for free on YouTube for 8 years*.
- Ways to support the platform:
 - **Subscribe** to the channel 🔔.
 - **Share** courses with friends 🔗.
 - Use course links provided in the description box and comment section.
 - Utilize *paid courses* available at nominal charges on the **Engineering Funda Android application** 📱.

7. Engineering Funda Android Application Features 🚀

The Android application offers many exciting features:

- **Chapter-wise high-quality videos:** *100% course availability* without any ads.
- Study material available in **PDF format** 📄.
- **MCQ tests** with *instant results* and *solutions*.
- **Electronics experiments in Multisim software** for learning and testing circuits 🧪.
- Opportunity to receive **course certification** 📜.
- **All-Course Subscription:** Access *more than 20 premium courses* at very nominal charges.
- Many subjects offer **free material**.
- **Recruitment news alerts** for job updates 📢.
- Numerous other exciting features.

The link to the app is available in the description section.
